

UNIBODY MEASURING, ANCHORING, AND PULLING

Course Overview

Measuring, anchoring, and pulling will allow technicians to measure a vehicle with collision damage and focus on the anchoring and pulling strategies. Through simulation, by securing the vehicle and placing it onto a frame machine, students will measure, anchor, and attach the pulling attachments needed to simulate a pull.

Course Content

Module 1 - Unibody Measuring, Anchoring & Pulling

Topics: Video Presentation

- Overview | Introduction | Construction Materials
- Safety Precautions
- Research, Inspection, and Preparation
- Front Damage | Sedan
- Rear Damage | SUV
- Car-O-Liner Tolerance Settings
- Tools
- Stress-Relieving
- Measuring Is Essential
- Anchoring
- Documentation

Course Test

- Post Course Test

Course Highlights:

Points: **0.5**

Estimated Duration: **1h 45Min**

Format: **Online**

After completing this course,
you will be able to:

- Identify Safety Precautions for measuring, anchoring and pulling unibody vehicles
- Identify suspected vehicle damage based on measurements
- Interpret measurement results
- Identify anchoring strategies
- Determine where to add supplemental anchoring
- Determine effective pulling strategies to remove damage
